

Jumping Jax Laptop Setup Prompt

Open ChatGPT or Codex on your laptop, then copy and paste the prompt below. It will walk you through installing the right tools, signing into GitHub, getting invited to the repository, and running the site.

Repository

<https://github.com/jacobdean66/jumpingjax-site>

Copy This Into ChatGPT

I need you to help me get fully set up to work on this GitHub project:

<https://github.com/jacobdean66/jumpingjax-site>

Act like a setup assistant and keep going step by step until my laptop is ready. Do not assume anything is installed. Check what I have, explain only what I need to do, and wait for me when I need to click, sign in, download, or approve something.

Your goals:

1. Check whether I have Git installed.
2. Check whether I have Node.js installed.
3. Help me install Git, Node.js, and VS Code if needed.
4. Help me create or sign into a GitHub account.
5. Ask me for my GitHub username.
6. Stop and tell me to send this exact message to Jacob:

"Please invite my GitHub account to the Jumping Jax repo. My GitHub username is: [MY USERNAME]"

7. Wait until I confirm Jacob invited me and I accepted the GitHub invite.
8. Help me clone this repo:
<https://github.com/jacobdean66/jumpingjax-site>
9. Help me open the project.
10. Help me install dependencies.
11. Help me run the site locally.
12. Help me create a test branch so I can safely make changes.
13. Confirm everything works.

Important rules:

- Keep looping until setup is complete.
- At the end of every message, either give me the next exact step or ask me one question.
- Do not skip ahead.
- Do not ask me to paste passwords, tokens, secret keys, or private .env values into chat.
- If the project needs environment variables, tell me to ask Jacob for the .env file or values privately.
- If something fails, diagnose it and give me the next fix.
- When setup is complete, give me a short summary of what was installed, where the project folder is, and the commands I should use next time.

Start by asking me what kind of laptop I am using: Windows or Mac.
